PRECISION PLANETARY GEARBOX

Jiangsu DINGS' Intelligent Control Technology Co., Ltd.

PRODUCT INTRODUCTION

Introduction

Product name : Precision planetary gear box
 Model : 16PGX138-30L-0-0-00MC (Example)

How to Work

Generally NGW type, fixed by tooth ring, sun wheel high speed input, planetary frame low speed output, according to a certain deceleration ratio, reduce the output speed and improve the output torque.

Application

Precision planetary gear box has the advantages of small size, high power density, large speed ratio range, coaxial arrangement of input and output, high efficiency, and is widely used in military, medical equipment, auto parts, small household appliances, smart home, solar energy, intelligent robots, precision instruments, automation equipment and other industries

PRODUCT FEATURES

1 High load carrying capacity

Each stage of transmission can be shared by multiple planetary gears, and compared with ordinary parallel shaft gear transmission, planetary gear boxes have higher load carrying capacity and durability

2 Compact construction

Input and output coaxial arrangement, small radial size, light weight, can achieve a large deceleration ratio in a limited space.

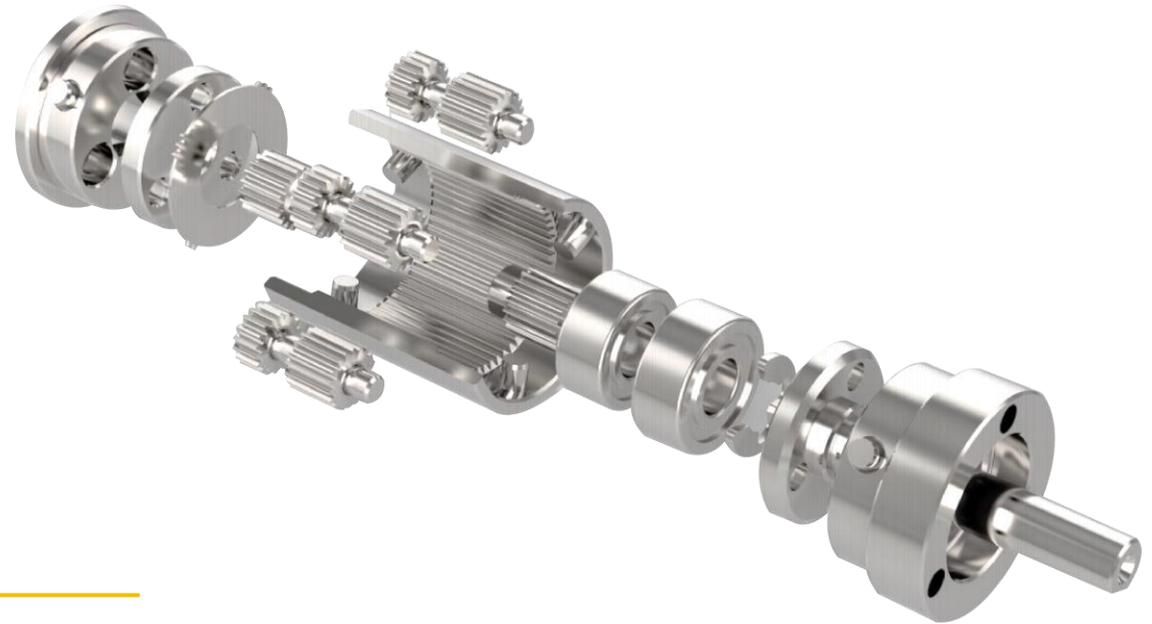

3 Smooth operation

The multi-tooth meshing transmission of the planetary gear is more stable, with less vibration and noise.

4 High transmission efficiency

Take the 16 series gear box as an example, the primary transmission efficiency can reach 90%, the secondary can reach 80%, and the transmission efficiency is high.

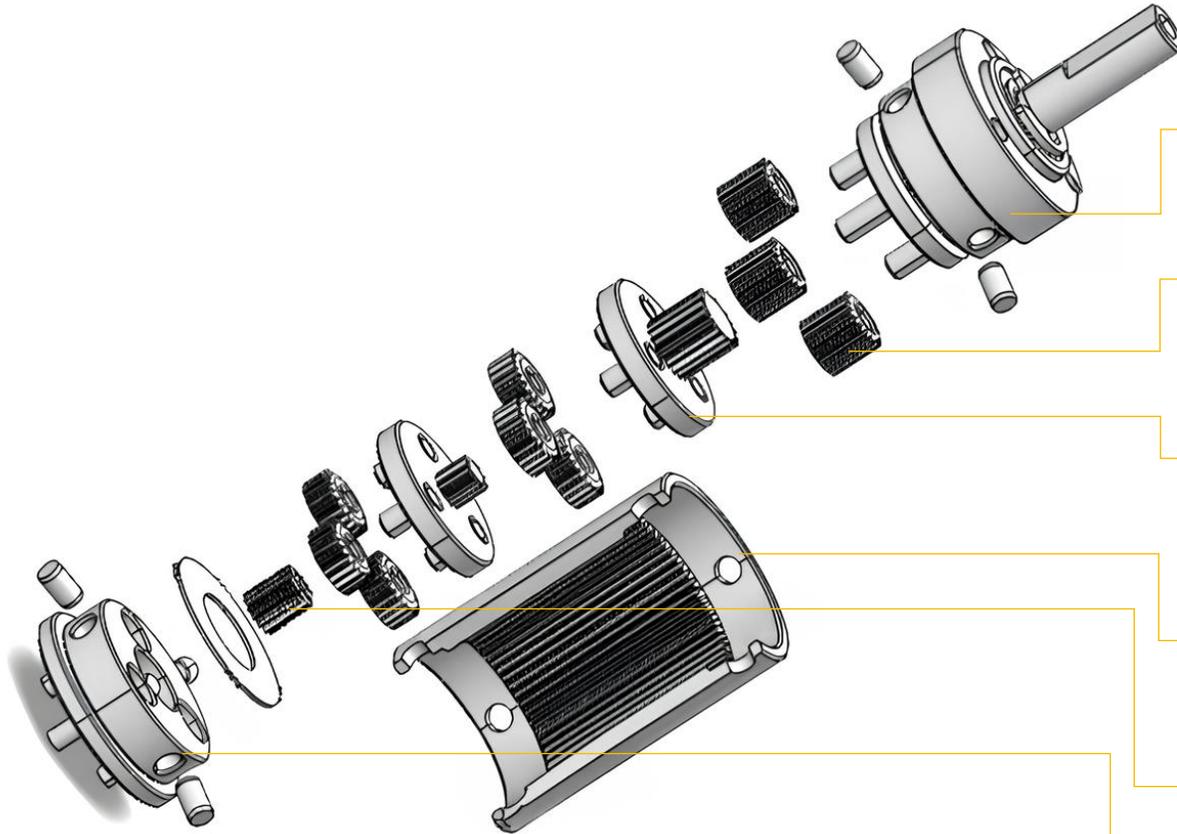

PRODUCT STRUCTURE

Product structure description

The input power is transmitted to the planetary gear through the sun and the planetary gear rotates around the sun gear under the drive of the planetary frame, while engaging with the fixed inner gear ring. Through this series gear meshing and rotating motion, according to a certain reduction ratio to achieve power distribution and deceleration, reduce the output end of the speed and the output end of the torque, and finally output to the output shaft.

PRODUCT STRUCTURE

■ Output shaft assembly

As the power output of the gearbox as a whole, the torque after deceleration is transmitted to the load.

■ Planetary gear

Distributed around the sun gear, meshing the sun gear and the inner tooth ring, supported by the planetary frame.

■ Planetary frame

Supports and drives the planetary gear to rotate around the sun gear and acts as a carrier to output power.

■ Inner gear ring

Fixed in the housing, meshing the planetary gear.

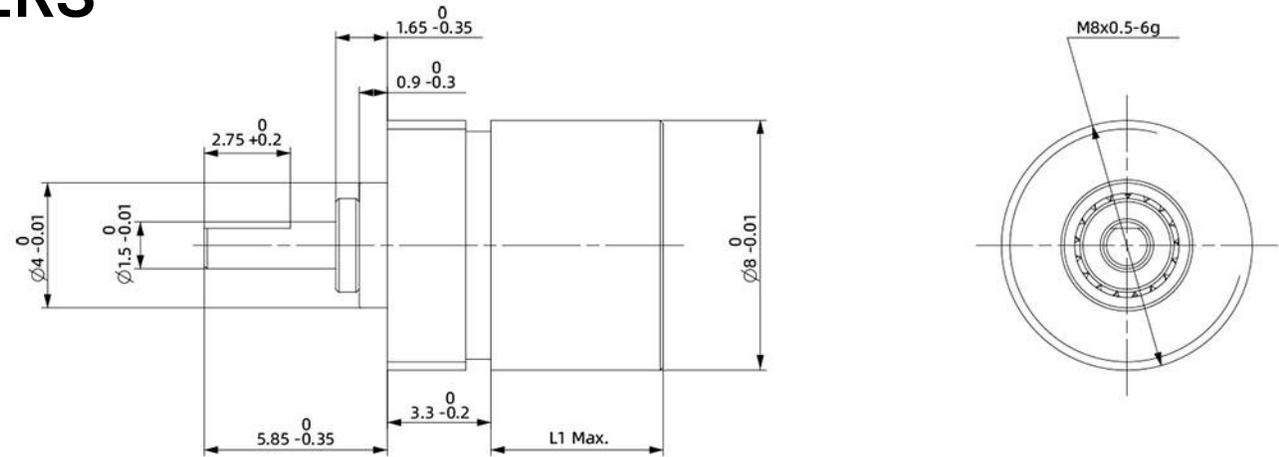

■ Sun gear

Located in the center, it is the gear that inputs power.

■ Motor joint assembly

Including motor joint, gasket, screw, is the connection between the gear box and the motor.

PRODUCT MANUFACTURING

Use the gear measuring instrument of the same specification of the National Testing Center

Key parts are produced independently with imported equipment, with equipment investment of more than U\$4.3Mil

GEAR PROCESSING & TESTING EQUIPMENT

GF Machining Center

A machining center is an efficient and precise CNC machine tool that can process complex surfaces and precision parts.

It has advantages such as high precision, high speed, high flexibility and advanced automation.

GF adopts efficient vertical machining centers for large-sized cast iron structural components which can ensure good vibration absorption, high stability and high rigidity during continuous machining under large load-bearing conditions.

GEAR PROCESSING & TESTING EQUIPMENT

Backlash Detector

The computer-controlled gearbox backlash arc minute measuring bench is composed of a loading system, rotation system, spatial adjustment mechanism, FTS (Fault tolerance system) precision testing system, computer control display system, and clamping mechanism.

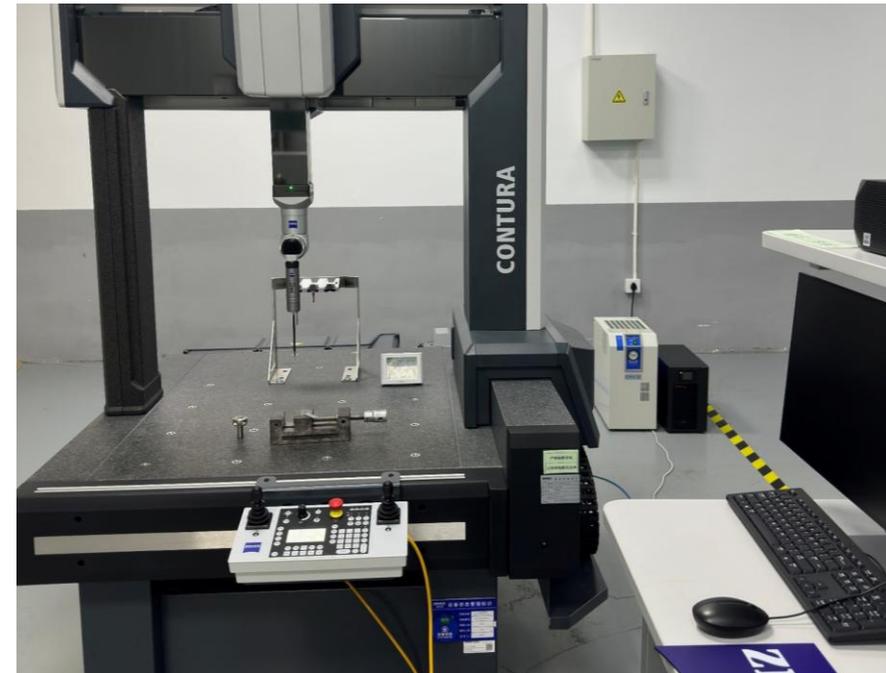

It is suitable for performance testing of planetary gearbox backlash includes forward and backward no-load repeated positioning detection, return clearance, backlash testing, backlash arc minute measuring and minimum starting torque detection.

GEAR PROCESSING & TESTING EQUIPMENT

Zeiss Coordinate Measuring Machine

It is a measuring instrument used in the fundamental disciplines of engineering and technical science as well as the field of mechanical engineering in order to measure the geometric dimensions of products includes diameter, distance, angle, shape, position dimensions and output coordinate values of measurement elements.

GEAR PROCESSING & TESTING EQUIPMENT

Gear Hobbing Machine

Capable of cutting straight and helical cylindrical gears as well as machining worm gears, sprockets etc.

A gear processing machine tool for machining spur, helical, herringbone cylindrical gears, and worm gears using a hob according to the generation method.

GEAR PROCESSING & TESTING EQUIPMENT

Klinberg Gear Measurement Center

It is an analytical instrument used in the fields of physics, engineering, technical science and mechanical engineering.

The measurement center can detect cylindrical gears, bevel gears, gear shapers and shavers, worm gears, rotors, hobs, broaches, rotational symmetric workpieces etc.

It can also be used for Fourier detection of new energy gears.

GEAR PROCESSING & TESTING EQUIPMENT

Broacher

A machine tool that uses a broach as a tool to process through holes, flat surfaces and formed surfaces of workpieces.

Broaching can achieve high dimensional accuracy and small surface roughness, high productivity and is suitable for mass production in batches.

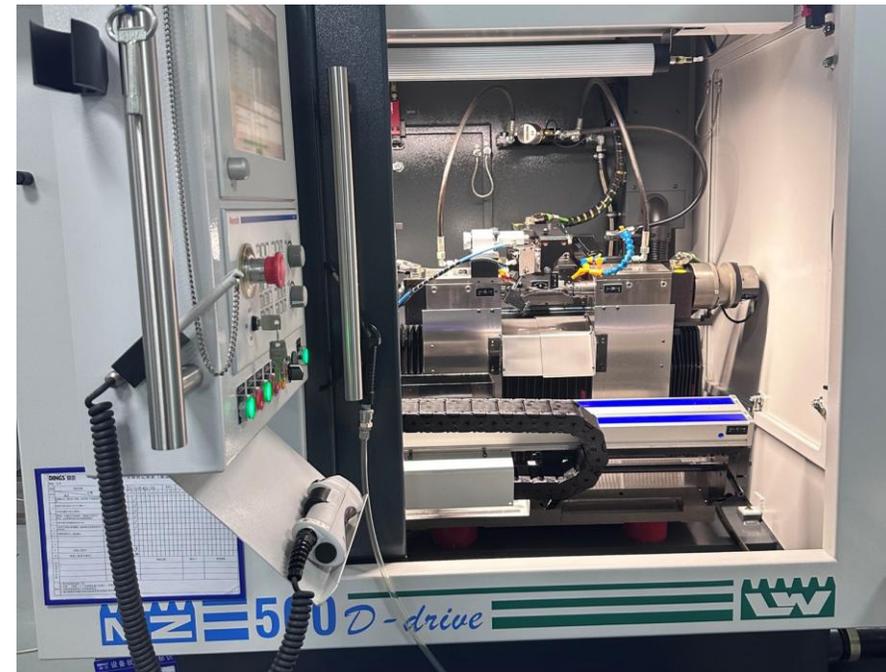

GEAR PROCESSING & TESTING EQUIPMENT

Small Module Gear Hobbing Machine

The Swiss Lambert Wahli small module gear hobbing machine 500D is a representative product of its company with excellent performance.

It is used for high-performance and high-precision small module gear machining, eight axis CNC and is used in the clock, instrument and micro machinery industries.
